INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/EP2004/012655

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Reference is made to the following documents

D1:US-A-3250778 D2:US-A-3296275

D3:US-A-3822274

2. Novelty (Art.33(2)PCT)

2.1 The present application relates to a multistep process of preparation of a vitamin B6 precursor 9-acyloxy-1,5-dihydro-8-methylpyrido[3,4-e][1,3]dioxepin derivatives(I) comprising the following steps: a) a diels Alder addition of a 4-methyl-5-alkoxy-oxazole and a 4,7-dihydro-(1,3)-dioxepin in the absence of solvent and catalyst b) addition of an anhydrous organic acid to the product mixture and rearrangement of the Diels-Alder major product and subsequent acylation to the final product (I) The prior art Document 2.2 D1 and D2 disclose a process of preparation of (I) by the same Diels Alder reaction, in the absence of solvent and catalyst, isolation of the intermediate product and obtention of the final product (I) by treatment with either HCI (see D1 claim 1,example 21,column 2 lines71- column 3, line 8) or pyridoxine hydrochloride (see D2, claim1,Example 2). The said documents are therefore prejudicial to the Novelty of the present claims. The subsequent examination is valid on the condition that new claims are filed which are allowable and which do not contain known subject matter.

3. Inventive step(Art.33(3)PCT)

- 3.1 The object of the present invention is to provide a process for the preparation of 9-
- **3.2** The prior art documents D1 and D2,, which disclose same process for the preparation of the same compounds are considered to represent the closest state of the art..
- **3.3** The experimental data comprised in the application show that the present invention provides a process for the preparation of (I). But the prior art documents describe the same process for the preparation of the same compounds. The optimization of reaction conditions is a common practise for the person skilled in the art.. Consequently the subject matter of the present claims 1-15 does not involve an inventive step. The applicant is therefore kindly requested to submit any relevant evidence for unexpected advantages
